                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of treating a subject having or at risk co f developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-1 (HIF-1) complex modulators. Mari-hypoxia responsive complex modulators. Mari-hypoxia malignancy or MDR complex modulators. Mari-hypoxia malignancy or MDR complex modulators. The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders complex myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. anglogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia pesential thrombocythaemia or polycythaemia vera. The complex myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The complex myeloid myeloid metaplasia pesential thrombocythaemia or polycythaemia vera. The complex myeloid myeloid metaplasia pesential thrombocythaemia or polycythaemia vera. The complex myeloid myeloid metaplasia pesential thrombocythaemia or polycythaemia or polycythaemia or polycythaemia or polycythaemia or polycythaemia or polycythaemia or polycytha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        element (HRE) binding molecules or antisense nucleic acid molecules and sumo-1 binding molecules or antisense molecules are useful for treating subject having or at risk of developing haematologic malignancy or MDE (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia roblycythaemia vera. This invention is used in gene therapy. The present sequence is an antisense oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its expression. This oligo is used in the exemplification of the invention
                      Novel nucleic acid sequence, tumor involved genes, useful cancer, for evaluating cancer

Mul 용 The invention discloses isolated human nucleic acid alternative splicing CC variants that are all tumour-involved genes (TIGs). The nucleic acids and CC polypeptides are useful for determining the level of a nucleic acid or CC polypeptide in a biological sample, for detecting a variant nucleic acid or polypeptide in a biological sample, for detecting a variant nucleic acid or polypeptide sequence in a biological sample, for determining the level of variant nucleic acid or polypeptide sequences in a biological sample cC and for determining the level of the variant sequence in a first biological sample and the level of the original sequence in a cC the variant has been varied by alternative splicing in a second composition comprising a carrier and the nucleic acid, is useful for treating diseases (e.g. cancer) that can be ameliorated or cured by increasing or decreasing the level of the encoded protein. The nucleic acids are also useful for diagnostic purposes, especially for detecting cancer or a predisposition to cancer, for evaluating the state or cc aggressiveness of cancer disease, in basic research, for understanding the physiological function of the original TIG, in targeting or cc cycle of the same type of cells which may be helpful for the development of pharmaceuticals for various cancer stages in which cell cycle is non-normal, for determining mutations in tumour-involved genes and in gene composition to the variant product and modulating its activity and for compounds capable of binding to the variant product and modulating its activity and for composition to cancer stages in which cell cycle is non-composition. The sequences presented in composition as well as to composite either ex vivo or in vivo. The sequences presented in composition and disclosed or in vivo. The sequences presented in composition and disclosed in the TIGs disclosed Matches Query Match Sequence 2307 Claim 1; Multidrug-resistance 25-MAR-2003 27-MAR-1995 AAQ70907 standard; Multidrug-resistance; MDR-1 gene; AAQ70907; 04-AUG-1994.                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the multidrug resistance gene (MDR-1) amplified CC by the primers shown in AAT43320 and AAT43321. This sequence can be used CC as a target in the method of the invention, for enzymatically amplifying CC atarget nucleic acid (TNA) sequence contained in a nucleic acid or comparises. The method comprises using three primers, one complementary CC polymerase. The method comprises using three primers, one complementary to a first segment of the TNA, a second complementary to a second segment to the first primer, and a third which is comparise on the first primer. The first two primers are hybridised to the TNA, and a fused amplification product is created from the TNA using CC the third primer. The fused product is dissociated, and hybridised to the third primer, which is then extended. The extended modified CC amplification product is hybridised to the first two primers, and these CC two primers are ligated. Each of the primers may be labelled using a CC different label so that the method can be used to detect the presence of CC amutation or allele by detecting whether the labelled primer is CC contained within the fused amplification product or the extended contained within the fused amplification product or the extended CC amplification product. The method of the invention combines certain CC extended, and the fact that the entire TNA sequence does not need or the known.
                                                                                                                                                                                                                                                                                         Query Match

This invention relates to novel isolated polynucleotides identified as CC human transporters and ion channels (TRICH), and the encoded polypeptides CC thereof. Specifically, it describes using these TRICH molecules, as well as agonists, antisponists, antibodies, expression vectors and host cells, in appropriate screening and toxicity assays to assess the effects of CC exogenous compounds on TRICH expression. The present invention describes CTRICH compositions that are useful in the diagnosis, treatment and CC prevention of various disorders such as cell proliferative (e.g. arteriosclerosis, cancer), autoimmune/inflammatory (e.g. AIDS, asthma), CC arteriosclerosis, cancer), autoimmune/inflammatory (e.g. AIDS, asthma), CC explored (e.g. epilepsy, stroke) and developmental (e.g. Cushing's syndrome hypothyroidism) and for infections. Accordingly, these TRICH collecties can be used for gene therapy purposes and exhibit various activities such as cytostatic, antiinflammatory, immunosuppressive, CC antiasthmatic, anticonvulsant, nootropic and neuroprotective.

CC protein interactions, drug-target interactions and gene expression profiles. This polynuclectide sequence is a human TRICH cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Baughn MR, Because T., H

                                                                                                                                                                                                                                                                                                        The invention relates to inhibiting expression of a target gene (I) in a cell by introducing an inhibitory RNA (dsRNAI) having a double-stranded structure of at most 49 consecutive bases. At least part of one strand (asl) of dsRNAI is complementary to (I) and at least one end of dsRNAI has an overhang of 1-4 nucleotides. The method is used to inhibit the expression of a wide range of genes, e.g. oncogenes, cytokine genes etc. in humans, also genes in Plasmodium or in viruses or viroids that are pathogenic for humans, animals or plants. Introducing an overhang into dsRNA greatly increases effectiveness for inhibiting gene expression, both in vivo and in vitro and also increases stability and thus the effective concentration inside the cell. The present sequence is that of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibiting expression of target gene, useful e.g. for inhibiting oncogenes, by administering double-stranded RNA complementary to target and having an overhang.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to inhibiting expression of a target gene in a cell CC by introducing at least two oligoribonucleotides (dsRNAI and II), both CC with a double-stranded (ds) structure of at most 49 sequential nucleotide CC pairs. At least part of one strand (S1, S2) of the ds structures in each CC of dsRNAI and II are complementary to regions in the target gene. The CC method uses antisense inhibition of gene expression using double stranded CC RNA inhibition (RNAI). The method is particularly used to treat tumours CC or infections, especially by plasmodium or viruses/viroids (pathogenic on CC chumans, animals or plants). The method provides more effective inhibition CC concentrations. When dsRNA has at least one unpaired nucleotide at the CC concentrations. When dsRNA has at least one unpaired nucleotide at the CC and efficiency can be increased further by pretreating the cells with cCC interferon. The present sequence is that of a target DNA of the invention volve.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The method is used to inhibit expression of target genes, particularly oncogenes, cytokine genes, Id (not defined) protein genes; developmental or prion genes, or genes expressed in pathogenic organisms (particularly plasmodia) or in viruses or virolds (pathogenic in humans, animals or plants). Treating the cells with interferon greatly increases the extent to which dsRNA can inhibit expression of the target genes, and the effect is even greater when dsRNA are modified to increase their stability. ABX09936-ABX10075 represent gene fragments used to illustrate the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL91797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, Id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases stability and thus intracellular concentration
                                                                                                                                                                  31-JAN-2001; 2001JP-00024723
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABQ78185 standard; cDNA; 3843

The method is used for the presumption of the side effect of an immunosuppressant. The present sequence is that of the MDRI encoding climmunosuppressant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Macaca mulatta

P-glycoprotein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rhesus monkey P-glycoprotein coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABT14496
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3843 BP; 1129
                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequence of a rhesus monkey (Macaca mulatta) P-glycoprotein and related P-glycoproteins. The DNA and protein sequences of the invention are useful in assays for evaluating the bioavailability of drugs, as well as the optimisation or discovery of drugs for the treatment of disease associated with P-glycoprotein transporter activity. The present cDNA sequence encodes the Rhesus monkey P-glycoprotein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid molecule encoding a P-glycoprotein of monkey, useful in assays for evaluating bioavailability of as for the optimization or discovery of drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19-MAR-2001; 2001US-0277095P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-MAR-2002; 2002WO-US008325

                                                                            This invention relates to novel isolated polynucleotides identified as CC human transporters and ion channels (TRICH), and the encoded polypeptides CC thereof. Specifically, it describes using these TRICH molecules, as well CC as agonists, antagonists, antibodies, expression vectors and host cells, in appropriate screening and toxicity assays to assess the effects of CC exogenous compounds on TRICH expression. The present invention describes TRICH compositions that are useful in the diagnosis, treatment and CC prevention of various disorders such as cell proliferative (e.g. arteriosclerosis, cancer), autoimmune/inflammatory (e.g. AIDS, asthma), CC entrological (e.g. epilepsy, stroke) and developmental (e.g. Cushing's molecules can be used for gene therapy purposes and exhibit various activities such as cytostatic, antiinflammatory, immunosuppressive, CC antiasthmatic, anticonvulsant, nootropic and neuroprotective.

CC Purthermore, a microarray is useful in monitoring or measuring protein-creative anticons, drug-target interactions and gene expression profiles. This polynucleotide sequence is a human TRICH cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          03-MAY-2002;

(AXYSB187) where the Gly at position 185 is replaced by Val. The CC (ANYSB187) where the Gly at position 185 is replaced by Val. The CC invention relates to transducing haematopoietic stem cells with nucleic acid encoding an MDR protein and culturing the modified cells. The CC modified haematopoietic stem cells are useful in bone marrow transplantation (to reconstitute haematopoietic systems in patients who have undergone chemotherapy or radiation therapy) and in ex vivo gene therapy of genetic defects in cells derived from haematopoietic stem cells, e.g., thalassaemia, Gauchier's disease, sickle cell anaemia or leukaemia. The modified cells can also be used to identify factors involved in regulating proliferation and differentianion in haematopoietic stem cells. Haematopoietic stem cells that express MDR-1 while the patient is undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells provides sufficient cells to permit standard biochemical analysis. Overexpression of MDR-1 allows cytokine-driven
                                                                                                                                                                                                                                                                                               This sequence represents cDNA encoding human wild-type multidrug resistance protein MDR-1. MDR-1 is a transmembrane efflux pump, responsible for the export of drugs from cells, particularly cancer cells. Wild-type MDR-1 shows increased resistance to etoposide and decreased resistance to vinca alkaloids compared with a mutant form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Multidrug resistance; MDR-1; P-glycoprotein; transmembrane efflux pump; haematopoietic stem cell; transduction; bone marrow transplantation; chemotherapy; radiation therapy; cancer; gene therapy; gene replacement genetic defect; thalassaemia; Gauchier's disease; sickle cell anaemia; leukaemia; ex vivo expansion; cytokine; wild-type; ds.
